LAST UPDATED: September 25, 2012

Procedure for replacing from 12 inch touch panel to 15 inch touch panel

General description

This document describes the procedure for replacing the 12-inch touch panel (VDS product) for the Xg series machines with the 15-inch touch panel (TPS product).

Note:

With the discontinuance of the 12-inch touch panel, when replacement of the currently used 12-inch touch panel is required, use the 15-inch touch panel instead.

1. Required software

The following software is required for replacing the 12-inch touch panel with the 15-inch touch panel.

Software	Required Version
System version	V1.40 or later
Application version	VGOS V1.18 R3.000 or later

Table 1

Note:

When the system version and the application version is older than the required version, please contact YAMAHA.

2. Required parts

The following is the retrofit kit required for replacing the 12-inch touch panel with the 15-inch touch panel.

■ Replacement parts

Retrofit kit	Part Name	Part No.	Qty	Note
15-inch touch panel Retrofit parts kit	TOUCH LCD SPARE KIT	KGT-M5119-A 0	1	When the machine is equipped with the front and the rear touch panels, prepare 2 sets.

Table 2

Caution:

When the machine is equipped with the front and the rear touch panels, and either of the touch panel is broken, replace both of them. (This is because the touch panel driver is the switch-over type.)

■ Component part of the retrofit kit

Retrofit kit	Part Name	Part No.	Qty	Note
15-inch touch panel	15" TOUCH LCD ASSY	KGT-M5119-02	1	
Mounting plate	PLATE,LCD	KGA-M1387-20	1	
DC12V power cable	HNS,LCD POWER	KGT-M663H-10	1	
Crossover ↔straight-through conversion adaptor	SERIAL REV.ADAPTER	KGT-M657F-10	1	
Gender changer	GENDER CHANGER 9PIN	KGT-M657F-00	1	Male connector ↔ Female connector
Cable ties	INSULOCK TIE	\$T18S-W	3	

Table 3

3. Replacement procedure

1. Replace the existing mounting plate with the one for the 15-inch touch panel.

Note:

As the screen size of the 15-inch touch panel is larger than the 12-inch one, it may interfere with the safety cover. Replace the existing mounting plate with the one for the 15-inch touch panel.

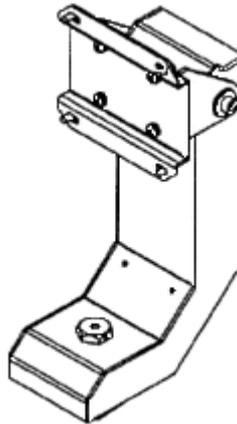

Figure 1

2. Attach the other spare parts referring to the figure below.

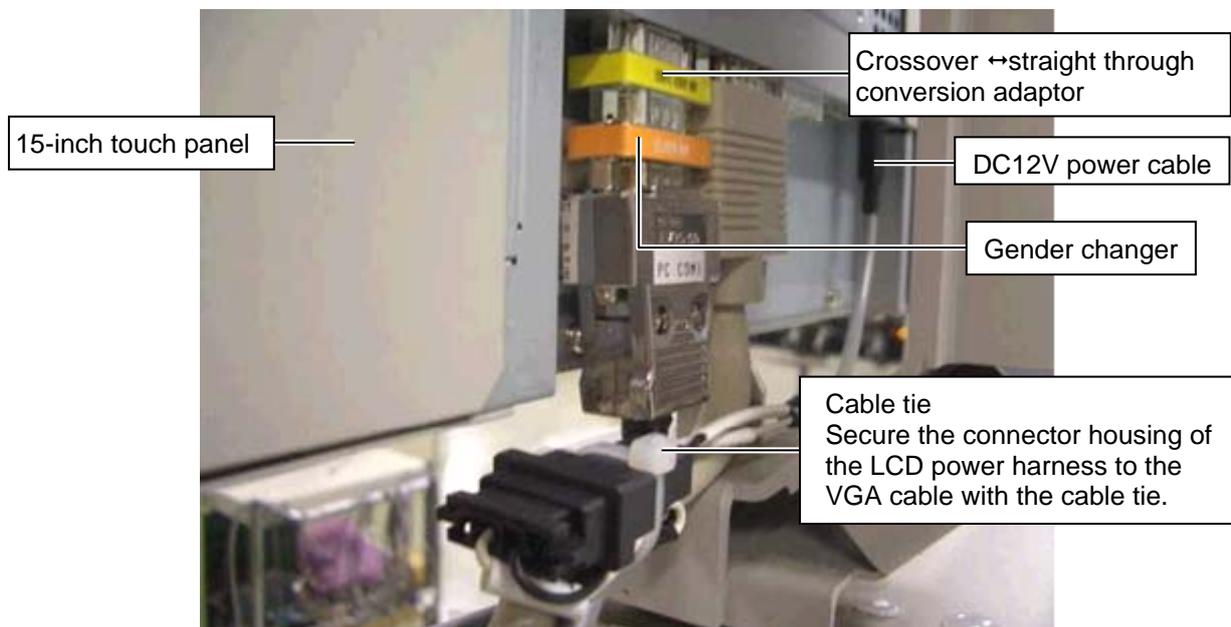

Figure 2

4. How to switch the touch panel driver

When replacing the 12 inch touch panel with the 15 inch one, the touch panel driver needs to be switched.

Caution:

When the machine is equipped with the front and the rear touch panels, and either of the touch panel is broken, replace both of them. (This is because the touch panel driver is the switch-over type.)

4.1 General description

For the Xg machines whose system version is V1.40 or later, not only the touch panel manufactured by VDS but also the ones manufactured by TPS (that has been adopted for the YG series machines) can be used.

In order to correspond to both of the touch panels, the function that switches between the two types of touch panel drivers has been added to the new system.

This section describes the procedure for switching the touch panel driver after replacing the touch panel.

4.2 Things to do before the work

1. **Make sure that the system version has been updated to V1.40.**
2. **When using the TPS touch panel, make sure that the application software version has been updated to V1.18R3.000 or later.**
3. **Make sure that the LCD touch panel to be replaced with is installed to the machine properly.**
 - TPS touch panel: 15-inch display
 - VDS touch panel: 12-inch display

When the model number is hidden and you cannot see it, distinguish the panels by its display size.

Note:

The specification of the communication cables is different between the TPS touch panel and the VDS touch panel. (TPS: Straight through cable, VDS: Crossover cable)

When changing the touch panel from the VDS product to the TPS product, the retrofit parts kit is required. (A Crossover ↔ straight-through conversion adaptor, a DC12V power cable, a gender changer and so on.)

Use the appropriate communication cable for each touch panel, otherwise the touch panel will not work.

When switching the touch panel drivers, the write filter needs to be disabled.

4.3 Work procedure

4.3.1 Disable the write filter

When switching the touch panels, the write filter of the C drive needs to be disabled beforehand. Follow the procedures below. (You do not need to log in as "Windows Administrator".)

1. **Power ON the machine.**
Turn the main switch to the right to power on the machine.
2. **Display the "Hardware Profile/Configuration Recovery" menu.**
When a message "Press spacebar now to invoke hardware/profile last known good menu" appears, press the space bar.
3. **Select "Disable Write Filter".**
Select "Disable Write Filter" by moving the arrow key, and press the [Enter] key.
4. **Display the Windows NT desktop.**
 - 1) When the Xg machine start screen appears, click the [Windows Mode] button before the timer gets to zero.
 - 2) When the "Operator" window for entering the Operator/Administrator password appears, enter the password for the administrator, and then click the [OK] button.
The Windows NT desktop (green) appears.

4.3.2 Switch the touch panel driver

1. **Click the [Start] button and select "Program" → "Touch Panel" and then select either of "Tps" or "Vds".**
 - When using the TPS product (15-inch touch panel), select "Tps" → "Touch TPS".
 - When using the VDS product (12-inch touch panel), select "Vds" → "Touch VDS".

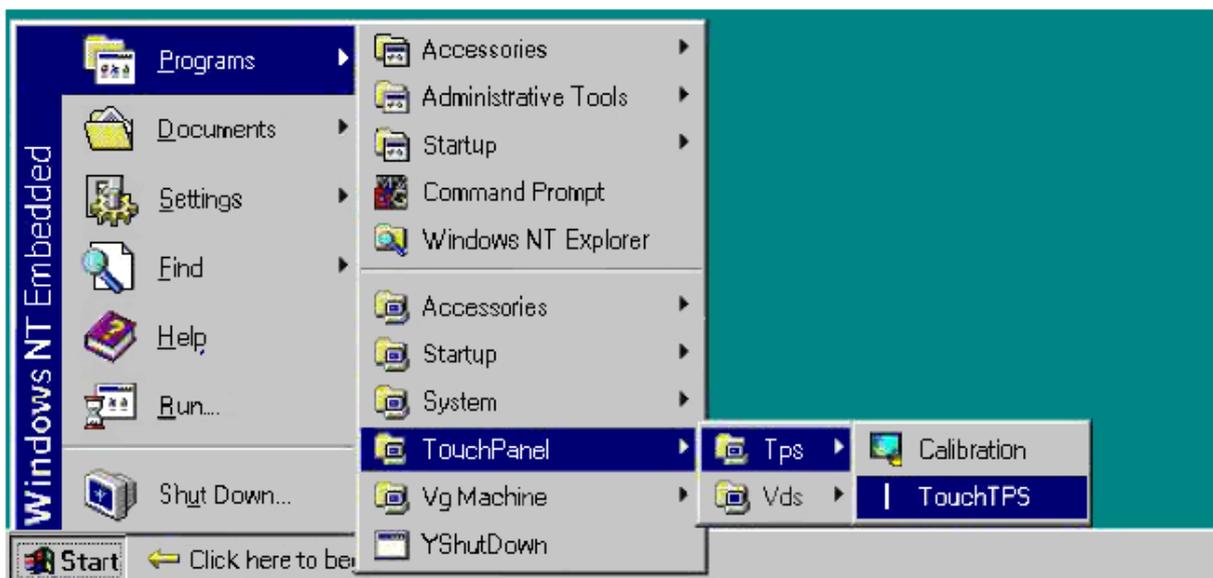

Figure 3

2. **Restart the machine to take the change into effect.**
3. **Power Off the machine by "YShutDown" and restart it, and then make sure that the touch panel operates properly.**

The touch panel has been switched by the above steps.
